

Globe valve, 2-way, Flange, PN 6

For closed cold and warm water systems
For modulating control of air-handling and heating systems on the water side

# Type overview

| Туре   | DN  | kvs<br>[m³/h] | Stroke | PN | n(gl) | Sv min. |  |
|--------|-----|---------------|--------|----|-------|---------|--|

## Technical data

| Functional data | Fluid                  | Cold and warm water, water with glycol up to max. 50% vol.                   |
|-----------------|------------------------|--|
|                 | Fluid temperature      | -10120°C   |
|                 | Fluid temperature note | At a fluid temperature of -102°C, a spindle heating is needed.               |
|                 | Flow characteristic    | equal percentage (VDI/VDE 2173) n(gl) = 3,<br>optimised in the opening range |
|                 | Leakage rate           | max. 0.05% of the kvs value  |
|                 | Closing point          | Top ( 🔺 )  |
|                 | Pipe connection        | Flange PN 6 according to ISO 7005-2  |
|                 | Installation position  | upright to horizontal (in relation to the stem)                              |
|                 | Servicing              | maintenance-free   |
| Materials       | Valve body             | EN-GJL-250 (GG 25)   |
|                 | Body finish            | with protective paint  |
|                 | Closing element        | Stainless steel  |
|                 | Spindle                | Stainless steel  |
|                 | Spindle seal           | EPDM O-ring  |
|                 | Seat                   | GG25 / Niro (Bypass)   |

Safety notes

| Â                                  | <ul> <li>The valve has been designed for use in stationary heating systems and must not be used outside the specified field in any other airborne means of transport.</li> <li>Only authorised specialists may carry out installation. All installation regulations must be complied during install</li> <li>The valve does not contain any parts that can be replaced.</li> <li>When determining the flow rate characteristic of controor must be observed.</li> </ul> | d of application, especially in aircraft or<br>ll applicable legal or institutional<br>ation.<br>ed or repaired by the user.<br>All locally valid regulations and |  |  |  |  |  |  |
|------------------------------------|---|---|--|--|--|--|--|--|
| Product features                   |   |   |  |  |  |  |  |  |
| Mode of operation                  | The globe valve is adjusted by a globe valve actuator. The commercially available modulating or 3-point control syst acts as a throttling device, into the opening position dicta   | tem and move the valve cone, which  |  |  |  |  |  |  |
| Flow characteristic                | An equal percentage flow characteristic is produced by the profile of the valve cone.   |   |  |  |  |  |  |  |
| Fluid velocity                     | Y Standard values for low-noise operation in HVAC systems are medium velocities of 12 m, fluid velocities above 2 m/s, further flow effects as well as cavitation can occur. This can re the service life of a valve depending on the situation.  |   |  |  |  |  |  |  |
| Accessories                        |   |   |  |  |  |  |  |  |

| Installation notes                 |   |   |  |  |  |  |  |  |
| Recommended installation positions | The globe valve may be mounted upright to horizontal. It valves with the stem pointing downwards.   | is not permissible to mount the globe   |  |  |  |  |  |  |
| Water quality requirements         | The water quality requirements specified in VDI 2035 must   | st be adhered to.   |  |  |  |  |  |  |
|                                    | Belimo valves are regulating devices. For the valves to fur<br>must be kept free from particle debris (e.g. welding bead<br>installation of a suitable strainer is recommended.   |   |  |  |  |  |  |  |
| Servicing                          | Globe valves and globe valve actuators are maintenance-   | free.   |  |  |  |  |  |  |
|                                    | Before any service work on the final controlling device is a  | carried out, it is essential to isolate the   |  |  |  |  |  |  |

Before any service work on the final controlling device is carried out, it is essential to isolate the globe valve actuator from the power supply (by unplugging the electrical cables if necessary). Any pumps in the part of the piping system concerned must also be switched off and the appropriate slide valves closed (allow all components to cool down first if necessary and always reduce the system pressure to ambient pressure level).

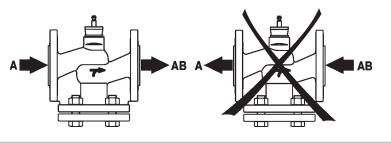

The system must not be returned to service until the globe valve and the globe valve actuator have been reassembled correctly in accordance with the instructions and the pipeline has been refilled by professionally trained personnel.

# **Technical data sheet**

Flow direction

**ion** The direction of flow, specified by an arrow on the housing, is to be complied with, since otherwise the valve could become damaged.

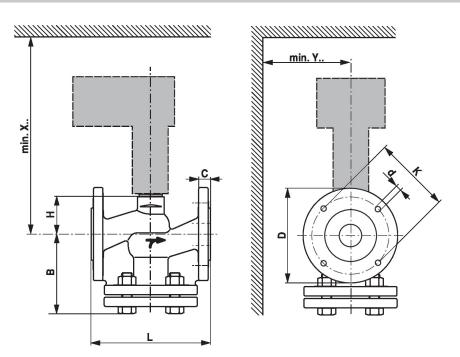

### Differential and close-off pressure

The maximum differential and close-off pressure of globe valves depends on the mounted globe valve actuator. To ensure optimum operation and maximum service life, the maximum differential and close-off pressure in the table below must not be exceeded.

| ps <600 kPa (PN6)<br>t= 5 120°C |     | LVA<br>500N  |                | NVA<br>1000N |                | SVA<br>1500N |                | AVKA<br>2000N |                | EVA<br>2500N |                | RVA<br>4500N |                |
