## Technical and mechanical design

The illustrations below show the basic design of the valves. Constructional features, such as the shape of plugs, may differ.

### 2-port valves

## 2-port valves pressure compensated

The VVF42..K valves use a pressure compensated plug. This enables the same type of actuators to be used for the control of volumetric flow at higher differential pressures.

Note

2-port valves do not become 3-port valves by removing the blank flange!

## 3-port valves

# Sizing

## Flow chart

$\Delta p_{max}$  values apply for the mixing function.  $\Delta p_{max}$  values for diverting function, see "Type summary", page 2 [▶ 2].

## Valve characteristics

### 2-port valves

0...30 %: Linear

30...100 %: Equal percentage

$n_{gl} = 3$  to VDI / VDE 2173

For high  $k_{vs}$  values the valve characteristic is optimized for maximum volumetric flow  $k_{v100}$ .

For product lines:  
VVF42.125-250  
VVF42.125-250K  
VVF42.150-400

### 3-port valves

#### Throughport A-AB

0...30 %: Linear

30...100 %: Equal percentage

$n_{gl} = 3$  to VDI / VDE 2173

For high  $k_{vs}$  values the valve characteristic is optimized for maximum volumetric flow  $k_{v100}$ .

#### Bypass B-AB

0...100 %: Linear

Tor AB = constant flow

Tor A = variable flow

Tor B = bypass (variable flow)

**Mixing:** Flow from port a and port B to port AB

**Diverting:** Flow from port AB to port A and port B

## Notes

### Engineering

#### Mounting location

Preferably mount the valves at the return, as the temperature is lower there and the strain on the stem sealing gland is lower.

#### Dirt trap

Mount a dirt filter or dirt trap before the valve to ensure the proper functioning and long service life of the valve. Remove dirt, welding beads, etc. from the valves and pipes.

#### Cavitation

Cavitation can be avoided by limiting the pressure differential across the valve depending on the medium temperature and prepressure.

## Mounting

### Mounting position

Mounting positions apply to both 2- and 3-port valves.

## Commissioning

**The valve may be put into operation only if actuator and valve are correctly assembled.**

Note

Ensure that the actuator stem and valve stem are rigidly connected in all positions.

Function check

Valve	Throughport A->AB	Bypass B->AB
Valve stem extends	Closes	Opens
Valve stem retracts	Opens	Closes

## Maintenance

The valves are equipped with maintenance-free, continuously lubricated stem sealing glands. See Accessories / Spare parts [▶ 6] for replacement stem sealing glands.

### **! CAUTION**

**When servicing valves or actuators:**

- Deactivate the pump and turn off the power supply.
  - Close the shutoff valves.
  - Fully reduce the pressure in the piping system and allow pipes to completely cool down.
- If necessary, disconnect the electrical wires.

## Disposal

---

Do not dispose of the valve as part of domestic waste.

- Special treatment for individual components may be required by law or make ecological sense.
- Comply with all local and currently applicable laws and regulations.

## Warranty

Application-related technical data are guaranteed only when the valves are used in connection with the Siemens actuators listed under "Type summary" and "Equipment combinations". When used with actuators of other manufacture, any warranty by Siemens becomes void.

The product environmental declarations CE1E4403en01 <sup>3)</sup> , CE1E4403en02 <sup>3)</sup> und CE1E4403en03 <sup>3)</sup> contain data on environmentally compatible product design and assessments (RoHS compliance, materials composition, packaging, environmental benefit, disposal).

Dimensions / Weight
See "Dimensions", [▶ 17]

- 1) For certain valve lines and high  $k_{vs}$  values, the valve characteristic is optimized for maximum volumetric flow  $k_{V100}$ .
- 2) Valves where  $PS \times DN < 1000$  do not require special testing and cannot carry the CE label.
