BELIMO®

Communicative damper actuator for adjusting dampers in technical building installations

• Torque motor 10 Nm
• Nominal voltage AC/DC 24 V
• Control communicative
• Conversion of sensor signals
• Communication via KNX (S-Mode)

KNX®

Technical data

|		
Electrical data	Nominal voltage	AC/DC 24 V
	Nominal voltage frequency	50/60 Hz
	Nominal voltage range	AC 19.2...28.8 V / DC 21.6...28.8 V
	Power consumption in operation	3.5 W
	Power consumption in rest position	1.4 W
	Power consumption for wire sizing	6 VA
	Connection supply / control	Cable 1 m, 6 x 0.75 mm²
Data bus communication	Communicative control	KNX (S-Mode)
	Number of nodes	max. 64 per line segment, reduce number of nodes with connection cable with short lines
	Medium	KNX TP
	Operating mode	S-Mode
	Current consumption of KNX-Bus	max. 5 mA
Functional data	Torque motor	10 Nm
	Torque variable	25%, 50%, 75% reduced
	Direction of motion motor	selectable with switch 0/1
	Direction of motion note	Y = 0%: At switch position 0 (ccw rotation) / 1 (cw rotation)
	Direction of motion variable	electronically reversible
	Manual override	with push-button, can be locked
	Running time motor	150 s / 90°
	Running time motor variable	43...173 s
	Adaptation setting range	manual
	Adaptation setting range variable	No action Adaptation when switched on Adaptation after pushing the manual override button
	Override control, controllable via bus communication	MAX (maximum position) = 100% MIN (minimum position) = 0% ZS (intermediate position) = 50%
	Override control variable	MAX = (MIN + 32%)...100% MIN = 0%...(MAX – 32%) ZS = MIN...MAX
	Sound power level, motor	35 dB(A)
	Parametrisation	with service tool ZTH EU Fast addressing 1...16 via push button possible
	Mechanical interface	Universal shaft clamp 8...26.7 mm
	Position indication	Mechanically, pluggable
Safety data	Protection class IEC/EN	III, Safety Extra-Low Voltage (SELV)
	Degree of protection IEC/EN	IP54

Safety data	EMC	CE according to 2014/30/EU
	Certification IEC/EN	IEC/EN 60730-1 and IEC/EN 60730-2-14
	Mode of operation	Type 1
	Rated impulse voltage supply / control	0.8 kV
	Pollution degree	3
	Ambient humidity	Max. 95% RH, non-condensing
	Ambient temperature	-30...50°C [-22...122°F]
	Storage temperature	-40...80°C [-40...176°F]
	Servicing	maintenance-free
Weight	Weight	0.77 kg

Safety notes

⚠️

- This device has been designed for use in stationary heating, ventilation and air-conditioning systems and must not be used outside the specified field of application, especially in aircraft or in any other airborne means of transport.
- Outdoor application: only possible in case that no (sea) water, snow, ice, insolation or aggressive gases interfere directly with the device and that it is ensured that the ambient conditions remain within the thresholds according to the data sheet at any time.
- Only authorised specialists may carry out installation. All applicable legal or institutional installation regulations must be complied during installation.
- The device may only be opened at the manufacturer's site. It does not contain any parts that can be replaced or repaired by the user.
- Cables must not be removed from the device.
- To calculate the torque required, the specifications supplied by the damper manufacturers concerning the cross-section, the design, the installation situation and the ventilation conditions must be observed.
- The device contains electrical and electronic components and must not be disposed of as household refuse. All locally valid regulations and requirements must be observed.

Product features

Mode of operation
The actuator is equipped with an integrated interface for KNX (S-Mode) and can be connected with all KNX devices that have corresponding data points available.

Converter for sensors
Connection option for a sensor (passive or active sensor or switching contact). In this way, the analogue sensor signal can be easily digitised and passed along to KNX.

Parametrisable actuators
The factory settings cover the most common applications. As desired, individual parameters can be adapted for specific systems or servicing with a service tool (e.g. ZTH EU) or the ETS planning and commissioning tool.

Simple direct mounting
Simple direct mounting on the damper shaft with a universal shaft clamp, supplied with an anti-rotation device to prevent the actuator from rotating.

Manual override
Manual override with push-button possible (the gear train is disengaged for as long as the button is pressed or remains locked).

Adjustable angle of rotation
Adjustable angle of rotation with mechanical end stops.

High functional reliability
The actuator is overload protected, requires no limit switches and automatically stops when the end stop is reached.

Home position
The first time the supply voltage is switched on, i.e. at the time of commissioning, the actuator carries out a synchronisation. The synchronisation is in the home position (0%).

The actuator then moves into the position defined by the control signal.
Adaptation and synchronisation	An adaptation can be triggered manually by pressing the "Adaptation" button or with the PC-Tool. Both mechanical end stops are detected during the adaptation (entire setting range).

Automatic synchronisation after pressing the manual override button is configured. The synchronisation is in the home position (0%).

The actuator then moves into the position defined by the control signal.

A range of settings can be adapted using the PC-Tool (see MFT-P documentation)

Accessories

Electrical accessories	Description	Type
	Auxiliary switch 1 x SPDT add-on	S1A
	Auxiliary switch 2 x SPDT add-on	S2A
	Feedback potentiometer 140 Ω add-on	P140A
	Feedback potentiometer 200 Ω add-on	P200A
	Feedback potentiometer 500 Ω add-on	P500A
	Feedback potentiometer 1 kΩ add-on	P1000A
	Feedback potentiometer 2.8 kΩ add-on	P2800A
	Feedback potentiometer 5 kΩ add-on	P5000A
	Feedback potentiometer 10 kΩ add-on	P10000A

Mechanical accessories	Description	Type
	Actuator arm for standard shaft clamp (one-sided)	AH-25
	Shaft extension 240 mm Ø20 mm for damper shaft Ø 8...22.7 mm	AV8-25
	Ball joint suitable for damper crank arm KH8, Multipack 10 pcs.	KG8
	Ball joint suitable for damper crank arm KH8 / KH10, Multipack 10 pcs.	KG10A
	Damper crank arm Slot width 8.2 mm, clamping range Ø10...18 mm	KH8
	Shaft clamp one-sided, clamping range Ø8...26 mm with insert, Multipack 20 pcs.	K-ENMA
	Shaft clamp one-sided, clamping range Ø8...26 mm, Multipack 20 pcs.	K-ENSA
	Shaft clamp reversible, clamping range Ø8...20 mm	K-NA
	Form fit insert 8x8 mm, Multipack 20 pcs.	ZF8-NMA
	Form fit insert 10x10 mm, Multipack 20 pcs.	ZF10-NSA
	Form fit insert 12x12 mm, Multipack 20 pcs.	ZF12-NSA
	Form fit insert 15x15 mm, Multipack 20 pcs.	ZF15-NSA
	Form fit insert 16x16 mm, Multipack 20 pcs.	ZF16-NSA
	Mounting kit for linkage operation for flat installation	ZG-NMA
	Anti-rotation mechanism 180 mm, Multipack 20 pcs.	Z-ARS180
	Base plate extension for NM..A to NM..	Z-NMA
	Position indicator, Multipack 20 pcs.	Z-PI

Tools	Description	Type
	Service Tool, with ZIP-USB function, for parametrisable and communicative Belimo actuators, VAV controller and HVAC performance devices	ZTH EU
	Belimo PC-Tool, Software for adjustments and diagnostics	MFT-P
	Adapter for Service-Tool ZTH	MFT-C
	Connection cable 5 m, A: RJ11 6/4 ZTH EU, B: 6-pin for connection to service socket	ZK1-GEN
	Connection cable 5 m, A: RJ11 6/4 ZTH EU, B: free wire end for connection to MP/PP terminal	ZK2-GEN

Electrical installation
⚠️ **Supply from isolating transformer.**

Wiring diagrams

Connection without sensor
Signal assignment KNX:
D+ = KNX+ (pink > red)
D- = KNX- (grey > black)
The connection to the KNX line
should take place via WAGO
connecting terminals 222/221.

Connection with passive sensor, e.g. Pt1000, Ni1000, NTC

| Ni1000 | −28...+98°C | 850...1600 Ω [2] |
| PT1000 | −35...+155°C | 850...1600 Ω [2] |
| NTC | −10...+160°C [1] | 200 Ω...60 kΩ [2] |

1) depending on type
2) Resolution 1 Ohm
Compensation of the measured
value is recommended

Connection with switching contact, e.g. pressure control device

Requirements switching contact:
The switching contact must be
able to accurately switch a
current of 16 mA@24 V.

Connection with active sensor, e.g. 0...10 V @ 0...50°C
Possible voltage range:
0...32 V (resolution 30 mV)

KNX group objects

KNX group objects (continuation)

Setpoint	Specification of actuator position in % between the parameterised Min and Max limits. Recommended for 2-way and 3-way ball valves.
Setpoint Heating	Specification of the valve position for the heating sequence of a 6-way ball valve. The heating setpoint can be specified in the range from 0…100%. The flow can be limited with the Max communication object. The setpoint object (heating/cooling) with the last command is preferred.
Setpoint Cooling	Specification of the valve position for the cooling sequence of a 6-way ball valve. The cooling setpoint can be specified in the range from 0…100%. The flow can be limited with the Min communication object. The setpoint object (heating/cooling) with the last command is preferred.
Override control	Overriding the setpoint with defined override states. As data point type, 1 Byte (unsigned) is recommended (DPT 20.*)
Reset	Resetting the stored service messages (see KNX group object *Service information*).
Adaptation	Perform the adaptation. An active adaptation is signaled in Bit 8 of *Service information.*
Testrun	Performance of a testrun that checks the entire operating range. An active adaptation is signaled in Bit 8 of *Service information.* After completion, detected faults (mechanical overload, mechanical travel increased) are signaled in *Service information.*
Min	Minimum Limit (position) in **%**. Caution: Changing the setting may result in malfunctions.
Max	Maximum Limit (position) in **%**. Caution: Changing the setting may result in malfunctions.
Relative position	Current actuator position in %
Absolute position	Absolute position/stroke The data point type is to be selected depending on the type of movement: [°] DPT 8.011 [mm] DPT 7.011
Fault state	Collective fault based on Bit 0…Bit 7 of *Service information.*
Overridden	Signaling of an active override control (OPEN/CLOSED) The device can be commanded via the KNX group object *Override control* or via the forced switching at the input Y/3. Only the override controls OPEN and CLOSED are signaled.
Gear disengagement active	Signaling an active gear disengagement
Service information	Detailed information regarding device status As data point type, Bitset 16-Bit is recommended (DPT 22.*) Status information:

Bit 0:   Motor operation in relation to operating period too high
Bit 1:   Mechanical travel increased, e.g. defined end position exceeded
Bit 2:   Mechanical overload, i.e. defined end position not reached
Bit 3…7: not used with this device type
Bit 8:   Internal activity (Synchronisation, Adaptation, Testrun, …)
Bit 9:   Bus watchdog triggered
Bit 0:   Bit 7 are stored by the device and can be reset with the KNX group object *Reset*. As an alternative, the several bits can be read as collective fault state.

|	
Sensor value	The representation of the sensor value is dependent on the parameterization. See section „KNX parameters – Sensor"

KNX parameters

Common

Setpoint at bus failure	A setpoint can be defined for cases of communication interruption.

Values range: None (last setpoint)
Open
Closed
Mid

Factory setting: None (last setpoint)

The monitoring of the communication takes place for the KNX group objects *Setpoint* and *Override control*. If none of the objects is written within the parameterised monitoring time, the bus fail position is set and signaled in the *Service information* (Bit 9).

Bus timeout [min] Monitoring time for the detection of a communication interruption.

Values range: 1...120 min
Factory setting: –

Setpoint Mode Two operating modes can be selected.

„Common object mode"	Recommended for operation with 2-way and 3-way ball valves and damper actuators. Corresponds to the control of the actuator with a setpoint of 0...100%.
„Heating and Cooling separated"	Explicitly for the control of the valve actuator with 6-way ball valve. Two setpoints are available as communication objects. One setpoint for heating and one setpoint for cooling. These two setpoints are used by the valve actuator in accordance with the 6-way valve characteristic curve for controlling heating and cooling sequences.

Increment for value update [%] Actual values (position, volumetric flow) are transferred at the time of a value change insofar as these change by the parameterised difference value. If the relative value changes by the difference value, not only the relative actual value but also the absolute actual value are transferred.

Values range: 0...100%
Factory setting: 5%

The transfer is deactivated with 0% in the event of a value change.

Repetition time [s] Repetition time for all position and sensor actual values. Status objects are not transferred except with a change.

Values range: 0...3'600 s
Factory setting: 0 = no periodic transmission

KNX workflows

Product database The product database for the import in ETS4 or higher is available at the Belimo website.

Setting physical address The programming of the physical address takes place by ETS and the programming button on the device.

If the programming button is not accessible or accessible only with difficulty, then the address can be set using a point-to-point connection: "Overwrite Individual Address: 15.15.255"

As a third possibility, the physical address can be programmed on the basis of the KNX series number (e.g. with Moov'n'Group). The KNX series number is placed on the device in two versions. One sticker can be removed for adhesion on the commissioning journal, for example.

Firmware upgrade The KNX firmware of the device is updated automatically with the programming of the application program if the product database has a more recent version.

The first programming procedure takes somewhat longer in such cases (>1 min).

Resetting to KNX factory settings If necessary, the device can be reset manually to the KNX factory settings (physical address, group address, KNX parameters).

For the reset, the programming button on the device must be pressed down for at least 5 s during start-up.

Operating controls and indicators
① **Direction of rotation switch**

Switch over: Direction of rotation changes

② **Push-button and LED display green**

Off:	No power supply or malfunction
On:	In operation
Press button:	Triggers angle of rotation adaptation, followed by standard mode

③ **Push-button and LED display yellow**

Off:	The actuator is ready
On:	Adaptation or synchronisation process active or actuator in programming mode (KNX)
Flashing:	Connection test (KNX) active
Press button:	In operation (>3 s): Switch the programming mode on and off (KNX)
	When starting (>5 s): Reset to factory setting (KNX)

④ **Manual override button**

|	
Press button:	Gear train disengages, motor stops, manual override possible
Release button:	Gear train engages, synchronisation starts, followed by standard mode

⑤ **Service plug**
For connecting parametrisation and service tools

Service

Tools connection   The actuator can be parametrised by ZTH EU via the service socket.

For an extended parametrisation the PC tool can be connected.
