Use

Terminal housing for the control of Siemens control valves and pilot valves with magnetic actuator.

Functions

ZM../A

ZM100/A, ZM101/A,
ZM120/A, ZM121/A,
ZM200/A, ZM220/A

The electronic connections in terminal housings ZM../A are signal transducers respectively power amplifiers. They convert a DC 0...10 V or DC 4...20 mA positioning signal into a DC 0...20 V phase cut signal. The operating voltage of these electronic connections is AC 24 V.

Typical operating range of valves with magnetic actuators (0...100 % stroke).

The operating range is subject to coil temperature rise and valve size.

It is also possible to use the electronic connection ZM../A terminal housing as a "straight-through" terminal housing, supplied directly with a DC 0...20 V phase cut signal. In this case, the AC 24 V operating voltage must NOT be connected.

ZM110, ZM111, ZM210

The ZM110, ZM111 and ZM210 terminal housings are "straight-through" housings only.

The control properties of the valves with magnetic actuators are not affected by the type of electronic connection housing or the type of positioning signal.

Ordering

When placing an order, please specify type reference, stock number, description and quantity.

Example:

Type reference	Stock number	Description	Quantity
ZM100/A	ZM100/A	Electronic connection	1

Technical design

The differential amplifier with signal inputs [3] and [4] is isolated from the AC supply by a high resistance.

For 3-wire applications the signal negative [3] must be connected to AC supply terminal [1].

- | | | | |
|---|-----------------------------------|---|--|
| E | Electronic phase cut conditioning | T | Input resistance < 150 Ω
(ZM120/A, 121/A, ZM220/A with DC 4...20 mA only) |
| G | Bridge rectifier | V | Differential amplifier |
| M | Valve with magnetic actuator | | |
| Q | Phase cut output | | |

Sizing

Transformer sizing The transformer is sized by applying the following formula:
Transformer power $P_{Tra} = 1.4 \cdot \text{Sum of the individual loads}$

Mounting notes

⚠ Always switch off the power supply before connecting or disconnecting the electronic connection ZM.. or ZM../A terminal housing. Never remove or fit electronic connections with switched on operating voltage!

Caution! It is important to use the cable cross-sections appropriate to the various cable lengths used.

Maintenance notes

Electronic connections require no maintenance.

Disposal

The device is considered electrical and electronic equipment for disposal in terms of the applicable European Directive and may not be disposed of as domestic garbage.

- Dispose of the device through channels provided for this purpose.
- Comply with all local and currently applicable laws and regulations.

Warranty

Application-specific technical data must be observed.

If specified limits are not observed, Siemens Switzerland Ltd will not assume any responsibility.

Warning

If a ZM../A terminal housing is used with DC 0...20 V Phs (phase cut), AC 24 V must not be connected!
Always switch off the power supply before connecting or disconnecting the ZM.. or ZM../A terminal housing.
